

functional equations in mathematical pdf

In mathematics, a functional equation is any equation in which the unknown represents a function. Often, the equation relates the value of a function (or functions) at some point with its values at other points.

In general, an algebraic equation or polynomial equation is an equation of the form $P(x) = Q(x)$ where P and Q are polynomials with coefficients in some field (real numbers, complex numbers, etc.), which is often the field of the rational numbers.

Goal in this set of lecture notes is to provide students with a strong foundation in mathematical analysis. The lecture notes contain topics of real analysis usually covered in a 10-week course: the completeness axiom, sequences and convergence, continuity, and differentiation.

Abstract: We prove exact rate of decay for solutions to a class of second order ordinary differential equations with degenerate potentials, in particular, for potential functions that grow as different powers in different directions in a neighborhood of zero.
